

README

Thank you for downloading my edit of “Ice La Glace”'s iCEnhancer mod for Grand Theft Auto: IV.

Credit for the original files goes to Ice La Glace; however, what makes this mod original is the fact that I've individually modified the ENB files using iCEnhancer Config Tool.

Adds:

- More bloom
- More colour
- Black bars top & bottom (Widescreen movie effect)
- More realistic lens flare
- Depth of field

Known issues:

- **Game sometimes crashes when spawning a “random” car (Simple Native Trainer)**
FIX: This is a problem with either the car you are “spawning” or one of your car mods, avoid pressing “Alt-R” (the hotkey that spawns a “random” car, Simple Native Trainer)
- **Game displays missing textures when starting up**
FIX: Alt-tab in and out of the game and the textures will appear!

Install:

Simply drag and drop the contents of the folder “*Grand Theft Auto IV*” into your Grand Theft Auto IV folder, overwrite and allow any permission requests, and play!

This modification is designed to work with patch 1.0.4.0

Other patches have not yet been tested

Download patch 1.0.4.0 for Grand Theft Auto IV here:
