

AIRTRONIC RPG-7(USA)

40MM ROCKET PROPELLED GRENADE LAUNCHER

Airtronic U.S.A. has redesigned the world's most widely used anti-tank weapon, the RPG-7, and is manufacturing it in the USA. Others manufacture the RPG tubes from castings, and explosions, though rare, have occurred. Airtronic's new RPG tube is made from 4150 ordnance grade steel, the same kind used in M16 barrels, and is offered with ergonomic upgrades users of the M-16/M-4 assault rifles will find familiar.

An M16A2 pistol grip replaces the original straight grip on the Airtronic version of the RPG-7. An M4 carbine 6-position stock provides a snug fit while still allowing the tube to rest upon the user's shoulder, resulting in a more stable firing platform. Finally, Airtronic added Picatinny Rails to mount sights, lights, laser designators etc., to the standard 3, 6, 9 and 12 o'clock positions in two sets, above the pistol grip and, over the shoulder stop where the tube expands.

Made in the USA to US safety and quality standards.

Specification

Caliber:	40 mm
Weight:	15.3 Pounds (7.0 kg)
Length:	37.4 inches (950 mm)
Orientation:	Ambidextrous
Ammunition:	Wide variety. Backwards compatible with all existing rockets.
Maximum Range:	1000 Meters
Muzzle Velocity:	115 Meters/Second
Trigger Group:	Single Action
Launch Tube Mat'l:	4140/4150 ordnance grade barrel steel (no castings)
Inspection:	Magnetic particle and / or dye penetrant for defects
Accessories:	Iron Sight, M16A2 Pistol Grip, Sling, M4 6-position Buttstock, and Picatinny Rails included in base price. Upgraded optics, Rocket backpacks, cleaning kits, and operator manuals in a variety of languages also available for an upcharge.
Life Expectancy:	1000 rounds
Warranty:	2 years limited for defects in material and workmanship.

RPG-7-USA

ROCKET PROPELLED GRENADE LAUNCHER

RPG-7-USA

The first fully U.S. manufactured RPG-7. Includes picatinny rails, flip-up sights and stock as shown. Uses common M16 type components for optional configurations.
